

Reptile Adventures hands-on wildlife incursions assist with the delivery of the C2C curriculum.

PREP : Living things have basic needs, including food and water

During the session, students will:

- *Explore the basic needs of living beings, including food, water and shelter. Discuss how reptiles can go for long periods without food and water.*
- *Identify how different animals move – lizards walk and run, snakes slither, frogs jump, turtles swim and crocodiles gallop.*
- *Investigate why the sun is so important to reptiles.*
- *Recognise the difference between humans and reptiles*

YEAR 1 and 2 : Living things grow, change and have offspring similar to themselves

During the session, students will:

- *Explore the life stages of reptiles and amphibians, including the changes from birth.*
- *Identify different characteristics of life stages in animals, including metamorphosis, live born animals versus animals that hatch from eggs.*
- *Recognise that living things have similar young to themselves.*
- *Investigate why some animals take care of their young.*

YEAR 3 and 4 : Living things have life cycles and depend on each other and the environment to survive

During the session, students will:

- Explore why living things rely on non-living aspects of the environment for survival, for example, why are creek beds so important to turtles?
- Identify how changes in the environment can have an impact on life cycles.
- Recognise predator-prey relationships, as well as mutually beneficial relationships.
- Investigate why different habitats are so important to the wildlife living within it.

YEAR 5 and 6 : Living things have structural features and adaptations that help them to survive in their environment

During the session, students will:

- Explore how different adaptations are suited to different environments.
- Identify how different physical and behavioural traits of animals help them survive.
- Recognise that some living things can adapt to environmental changes, for example drought.
- Investigate why the ability to adapt is crucial to survival.

******* Sessions are 1 hour in duration, including observation, discussion and hands on interaction with animals**

\$7.50 per student (maximum group size 25 students)

Minimum cost \$165 per educational session *****
